Priyanshu Sharma

LinkedIn: www.linkedin.com/in/priyanshusharma005 Email: sharmaji.pitangwer@gmail.com
Github: www.github.com/evilsharmaji Mobile: +91-9958759864

Skills

Languages: Python, C++, Java, C, JavaScript
Core: Data Structures & Algorithms, Database Management Systems
Data Science & Analytics: Data Analysis, Data Visualization (Power BI, Microsoft Excel), Jupyter Notebook
Databases: MySQL
Web Technologies: HTML, CSS
Operating Systems/Platforms: Windows, Ubuntu (Linux)
Soft Skills: Problem Solving, Team Collaboration, Adaptability, Time Management, Communication

Projects

Data Structure Visualizer link — Jan 2026 – Feb 2026

- Architected an interactive visualization system illustrating internal mechanics of fundamental data structures through real-time animations
- Implemented core operations across arrays, stacks, queues, linked lists, hash tables, and binary search trees with stepwise execution flow
- Designed an educational interface integrating complexity analysis, pseudocode representation, and controllable simulation states
- Enhanced conceptual understanding by incorporating dynamic highlighting, structured traversal sequences, and intuitive graphical layouts
- **Technologies**: HTML5, CSS3, JavaScript (ES6), Canvas API

Traffic Sign Detection - Data Annotation link — Aug 2025 - Sep 2025

- Curated and annotated a traffic sign image dataset using precise bounding-box localization for multi-class road sign recognition tasks
- Engineered a clean, model-ready dataset by exporting annotations in YOLOv5-compatible format for object detection workflows
- Structured image–label pipelines following industry-standard directory conventions to support scalable training
- Established a foundational dataset to accelerate computer vision research for autonomous driving and intelligent transport systems
- **Technologies:** Roboflow, YOLOv5 Annotation Format, Bounding Box Labeling, Computer Vision Dataset Preparation

LVM WithDisk Management And ACL Config. link — June 2025 – July 2025

- Designed a scalable Linux storage framework utilizing Logical Volume Management (LVM) for flexible disk allocation and expansion
- Configured persistent filesystem mounting to ensure storage continuity across system reboots
- Implemented fine-grained Access Control Lists (ACLs) to enforce secure, role-based permissions in a multi-user environment
- Executed live logical volume resizing and filesystem expansion while maintaining data integrity
- Verified system reliability through storage inspection, access validation, and operational testing
- **Technologies:** Linux (Ubuntu), LVM, ACL, Shell Commands, ext4 Filesystem

Sport Diet Advisor AI Chatbot link — March 2025 – April 2025

- Constructed an AI-driven conversational assistant to deliver personalized sports nutrition recommendations based on user context
- Applied rule-based natural language processing to improve intent interpretation and response accuracy
- Demonstrated effective conversational design through human–computer interaction principles and dialogue flow control
- **Technologies**: Python, NLP Libraries, Streamlit, OpenAI API

Indian Unicorn Startups link — March 2025 – April 2025

- Conducted exploratory data analysis on Indian startup ecosystems to identify trends across valuation, funding stages, industry sectors, and geography
- Designed interactive dashboards to enable comparative analysis and strategic insight generation for business stakeholders
- Synthesized complex datasets into coherent visual narratives highlighting investment behavior and growth patterns
- **Technologies:** Microsoft Excel, Data Visualization Tools

Phishing Website Detection link — Feb 2025 – April 2025

- Developed a supervised machine learning model to accurately classify phishing and legitimate websites with high predictive reliability
- Performed systematic data preprocessing, feature engineering, and model evaluation using precision-driven performance metrics
- Validated the model's applicability for real-time cybersecurity threat detection in contemporary web environments
- **Technologies**: Python, Scikit-learn, Pandas, Jupyter Notebook

TRAINING

Linux OS - CPE Lovely professional University — June 2025 - July 2025

Project Overview:

- Designed and implemented a scalable storage management system using LVM on Ubuntu Server. Configured physical volumes, volume groups, and logical volumes, followed by dynamic disk expansion through VirtualBox and online filesystem resizing. Applied Access Control Lists (ACLs) to enforce fine-grained permission controls, ensuring secure and adaptive storage operations in a multi-user environment.

- **Tech**: Linux ,Ubuntu Server , Oracle VirtualBox

CERTIFICATES

- Cloud Computing - Swayam — Nov 2025
- Build Generative Ai app with NoCode - Infosys — Sep 2025
- Chatgpt 4 Prompt Engineering – Infosys — Aug 2025
- Computational Theory : Language Principle – Infosys — Aug 2025
- Linux Fundamental – Skill Development — July 2025
- Computer Networking - Coursera — April 2024

ACHIEVEMENTS

- Qualified 2nd Round Of Hackathon – Team: BinaryBits — April 2024
  Among 40 participants in LPU
- Three times Honored with Shield and Medal
  For contribution in Nagar Kirtan Event — Dec 2022

EDUCATION

Lovely Professional University — Phagwara , Punjab
*Bachelor of Technology - Computer Science and Engineering; **CGPA**: 5.53* — *August 2023 - Present*

Guru Harkrishan Public School — South-West Delhi , Delhi
*Intermediate; **Percentage:** 70.5* — *March 2023*

Guru Harkrishan Public School — South-West Delhi , Delhi
*Matriculation; **Percentage:** 68.5* — *March 2021*
